**MIT Supplies eRAD PACS to Haxton Hospital, Colorado to Improve Patient Care**

Greenville, South Carolina – March 15, 2010. eRAD, an industry leader in workflow solutions through its native Web-based RIS/PACS and Diagnostic Imaging Information Management Systems, announced today that Haxton Hospital, a rural hospital located in Haxton, Colorado has deployed eRAD PACS to enable prompt diagnosis by remotely situated radiologists using the eRAD web-based Diagnostic viewing and reporting system. Medical Imaging Technologies provided installation and training and will service and support the hospital's system using its qualified technical staff located throughout Colorado.

Haxton Hospital is an Acute Care facility providing comprehensive patient care and diagnostic services. Its remote location, with harsh winter weather and heavy snowfalls, presents unique challenges to the organization. Haxton Hospital has adopted web-accessible digital imaging in order to improve its ability to diagnose and treat patients promptly utilizing qualified radiologists located outside the community. Dr. Roy Miller, CEO of eRAD said, "Haxton Hospital has adopted web-accessible digital imaging and reporting technologies in order to improve their abilities to offer high-quality patient care to their community, despite the heavy winter snowfalls. The radiology department staff is pleased with the simplicity of use, fast turnaround of reports and the improved access to patient information gained with the new eRAD PACS."

Stephen Friedman, Executive Vice-President of eRAD cited high levels of satisfaction, "Installation, training and go-live by eRAD's Certified Reseller, Medical Imaging Technologies was faster and easier than the Hospital Staff anticipated. Operational efficiency at the hospital improved immediately. Haxton Hospital staff have mastered the system and everyone is pleased with the customized workflow and enhanced level of patient care they now enjoy, thanks to MIT and eRAD PACS."

About Haxton Hospital

Located on the plains in northeastern Colorado, Haxton Hospital is a patient-focused, primary-care organization that has served the rural community of Phillips County since 1949. The Hospital offers Acute Care including Surgery, Clinical and pathology testing, X-ray, CT, US, EKG MRI, 24-hr Trauma Center and Ambulance services. Hospital operations are often challenged by harsh winter weather and heavy snowfalls. Dedicated staff and seasoned administrators, physicians and clinicians have continued to improve patient care and in 2009, Haxton Hospital won the Rural Healthcare Excellence Award.
