**Baylor Orthopedic and Spine Specialty Hospital at Arlington
Selects eRAD's Web-based PACS**

Greenville, South Carolina – May 28, 2010 eRAD, an industry leader in workflow solutions through its native Web-based RIS, PACS and Teleradiology software platform announced today the selection of its software by Baylor Orthopedic and Spine Specialty Hospital at Arlington located in Arlington, Texas.

Three prominent organizations: Baylor Health Care System, Arlington Orthopedic Associates and United Surgical Partners International joined forces to build a specialty hospital in Arlington, Texas. The two-story, 57,200-square-foot hospital will focus on orthopedic and spinal surgery, with a full imaging department and physical-therapy services. The facility opened in February of 2010 with six operating rooms, one procedure room and twenty-four private patient rooms.

Baylor conducted a comprehensive and careful evaluation of competing systems focusing on very specific requirements necessary to service its specialty physician community and chose eRAD based on its native web-based architecture and advanced feature set. "Overall it was a good fit for our organization," commented Charlene Kirby, Baylor's PACS Administrator, "but it was due to some of the finer points such as the elegance of the spine labeling tools that led us to choose eRAD. Kirby continued, "This, together with the ability to create medical reports with embedded annotated images, and to automatically alert referring physicians via email or digital pager so they know to logon and access these online which can be done via any device running a web-browser such as a PC, PDA, etc. is why we selected this product. The reports can also be distributed via auto-fax, all of which can be done without need for a separate RIS which was a major factor."

About Baylor Orthopedic and Spine Specialty Hospital

Baylor Orthopedic and Spine Specialty Hospital at Arlington is a joint venture between Baylor Health Care System, Arlington Orthopedic Associates and United Surgical Partners International.

About eRAD

eRAD® was founded in 1999 and offers a standards-based, web-centric image management solution using leading-edge technology. eRAD PACS web-accessible archive, and workflow solutions are installed in over 225 customer sites throughout the USA. eRAD's PACS and RIS solutions integrate full-featured RIS/PACS and image management with workflow tools for hospitals, clinics, imaging centers and physician practices.
